

INTRASTACK SOLUTIONS

CRM Platform End User & Workflow Guide

Odoo 17 Community Edition

Customer Database · CRM Pipelines · Sales Contracts · Staffing Operations · Project Delivery · Timesheets · Employee Access · Reporting

Platform module: intrastack_crm

Document version: 2.1

Platform release: 17.0.2.2.0

Prepared: August 2026

Audience: Sales, Recruitment, Project Delivery, Consultants, HR and Management

Internal operating guide. Customer and candidate information must be handled according to company policy.

Table of Contents

01 Purpose, scope and operating model	14 Candidate submissions
02 Access, roles and login	15 Interviews and feedback
03 Navigation and record conventions	16 Placements and margin control
04 Customer and contact database	17 Cloud transformation workflow
05 CSV/XLSX import and export	18 Other service workflows
06 CRM opportunity data model	19 Employee activation administration
07 The four CRM pipelines	20 Reporting and CEO controls
08 Opportunity operating procedure	21 Daily playbooks by role
09 Activities and automation	22 Data governance and security
10 Quotation, contract and Sales Order	23 Troubleshooting and FAQ
11 Delivery projects and timesheets	24 Training simulation scripts
12 Staffing workflow overview	A Quick reference and glossary
13 Staffing requirements	

Important operating rule

Do not mark a deal Won or confirm a quotation merely to move the workflow forward. The system intentionally validates customer, commercial, classification and contract information before delivery begins.

01 | Purpose, Scope and Operating Model

The IntraStack CRM Platform is the operational system of record from the first customer interaction through commercial approval, staffing or consulting delivery, project execution and renewal.

What the platform controls

Customer truth

Companies, decision makers, operational contacts, candidates, vendors, communication details and relationship tags.

Commercial truth

Opportunity owner, pipeline, stage, expected value, source, urgency, quotation, contract dates and confirmed Sales Order.

Staffing truth

Requirements, recruiters, candidate submissions, interviews, placement approvals, rates and gross margin.

Delivery truth

Delivery project, template tasks, owners, deadlines, timesheets, commercial traceability and renewal dates.

End-to-end record flow

Staffing adds an operational branch between opportunity and delivery:

One record, one purpose

A CRM opportunity represents the commercial deal. A staffing requirement represents a specific role to fill. A candidate submission represents one candidate against one requirement. A project represents delivery after the commercial commitment is confirmed.

02 | Access, Roles and Login

Employees must use an **internal Odoo user**. Portal users cannot operate the CRM, Sales, Staffing and Project back office. Access is assigned from the Employee record by an HR Manager or System Administrator.

Role	Primary responsibilities	Included application access
Sales Manager	Manage teams, all opportunities, forecasts, quotations and approvals.	CRM/Sales management, quotation templates, Projects, timesheet approval.
Sales Executive	Manage assigned customer relationships, opportunities, activities and quotations.	CRM/Sales user, quotation templates, Projects, personal timesheets.
Recruiter	Operate requirements, candidate submissions, interviews and recruitment activities.	All CRM leads required for staffing, Staffing Operations and Project user access.
Project Manager	Plan delivery, assign tasks, monitor project execution and approve time.	All CRM leads, Project management and timesheet approval.
Consultant	Execute assigned work and record time.	Assigned Projects and personal timesheets.

First login

1. Open the company CRM URL using HTTPS.
2. Use the invitation email to set a personal password. Do not share accounts.
3. Confirm the correct company, timezone and language in Preferences.
4. Open the application selector and verify that the applications required for the assigned role are visible.
5. Configure notification preferences and review the Activities menu.

Current production application selector. Visible applications depend on the employee's assigned role.

Never share credentials

All changes are recorded against the logged-in user. Shared accounts remove accountability and can expose customer, candidate and commercial data.

03 | Navigation and Record Conventions

Common Odoo controls

Control	How to use it
Search bar	Search a value, add filters, group records and save frequently used searches.
Kanban	Visual pipeline. Drag records only when the operational exit criteria for the destination stage are met.
List	Bulk review, export and import. Use optional columns to expose owner, stage, activity and dates.
Chatter	Record internal notes, log messages, upload supporting files and review field changes.
Activities	Schedule calls, emails, meetings and to-dos with an owner and deadline.
Smart buttons	Open related quotations, staffing requirements, projects, submissions, interviews or placements.
Archive	Hide obsolete master data without breaking historical links. Prefer Archive over Delete.

Record naming conventions

- **Company:** legal or commonly recognized customer name.
- **Opportunity:** Customer - Service / Requirement - Period .
- **Staffing requirement:** Customer - Role - Location .
- **Project:** generated from the opportunity/order; retain the commercial reference.
- **Activities:** begin with an action verb and state the expected result.

Save information on the correct record

Customer facts belong on Contacts, deal facts on Opportunities, candidate facts on candidate Contacts/Submissions, and delivery execution on Projects/Tasks.

04 | Customer and Contact Database

The Contacts application is the shared customer database. A company is stored once and its people are created as related contacts. Candidates and recruiter vendors are also contacts, distinguished by relationship and tags.

Create a customer company

1 Open Contacts and select New

Select Company. Search first to confirm that the organization does not already exist.

2 Enter reliable identity data

Complete company name, website, phone, address, country, Tax ID where applicable and the responsible salesperson.

3 Add people under the company

Use the Contacts & Addresses area to create decision makers, procurement, technical and operational contacts. Add job title, direct email and mobile number.

4 Apply relationship tags

Tags enable filtering and management reporting. Use only approved tags and avoid creating spelling variants.

Current production Contacts list: use search, filters and grouping to locate customers and relationship types.

Contact quality checklist

- ☐ Company record exists only once.
- ☐ Individual contact is linked to the correct company.
- ☐ Email and telephone formats are valid.
- ☐ Job title and relationship role are current.
- ☐ Decision maker status on the opportunity reflects the primary deal contact.
- ☐ Internal notes do not contain unnecessary sensitive personal information.

The screenshot shows the Odoo 17 Contacts form for a company contact. The top navigation bar includes 'Contacts', 'Configuration', and a user profile. The left sidebar has a 'New' button and a search bar. The main form area is divided into two sections: 'Individual' and 'Company'. The 'Company' section is active, showing fields for 'Address' (Street, City, ZIP, State, Country), 'Phone', 'Mobile', 'Email', 'Website', and 'Tags'. Below these fields are tabs for 'Contacts & Addresses', 'Sales & Purchase', 'Invoicing', and 'Internal Notes'. The 'Contacts & Addresses' tab is selected, showing a list of contacts with an 'Add' button. The right sidebar contains a 'Send message' button, a 'Log note' button, and an 'Activities' section with a search bar and a 'Follow' button. Below the 'Activities' section is a 'Today' section with a list of recent activities, including a note from 'Administrator' about creating a new record.

Current contact form. Company and individual records together form the customer history.

Contact types used by IntraStack

Record type	How to create	Required operating convention
Customer company	Contacts → New → Company	One legal/customer organization per record; add approved customer tags.
Company contact	Open company → Contacts & Addresses → Add	Set the related company, job position, direct email/mobile and decision-maker relevance.
Candidate	Contacts → New → Individual	Use the Candidate tag; store general profile information on the contact and requirement-specific facts on the Submission.
Recruiter/vendor	Contacts → New → Company	Use Vendor and Recruiter Partner tags; keep commercial partner notes separate from candidate records.

How to find a customer's contact information

1. Open **Contacts** from the application selector.
2. Use the search field for company name, person name, email or phone.
3. Use filters such as **Companies**, **Individuals** or a relationship tag.
4. Open the company record and review the Contacts & Addresses section for stakeholders.
5. From an opportunity, click the Customer field or contact link to return to the shared customer database.

05 | CSV/XLSX Import and Export

Odoo 17 Community supports CSV and XLSX import. The controlled templates shipped with the platform use External IDs so the same file can update existing records without creating duplicates.

Download a template from the Import screen

After opening **Import records**, use the **Need Help?** panel to download the relevant **IntraStack Template**. Replace the example rows, preserve the header row, and upload the completed file on the same screen. Contacts provides separate templates for companies, people, candidates and recruiter vendors; CRM, Employees and each Staffing Operations record type provide their own template. Odoo's standard templates remain available, but the IntraStack templates are recommended because they include the platform's custom BRD fields and External ID relationships.

Current production Import screen. The Need Help? panel exposes the standard Odoo template and four IntraStack templates.

Exact import procedure

1. Open the target application and switch to **List view**. Import is not normally available from Kanban or Form view.
2. Open the list action menu (the small dropdown beside the list controls) and select **Import records**.
3. In **Need Help?**, click the template for the record type. For a customer load, download **Customer Companies** first, then **Company Contacts**.
4. Open the downloaded CSV/XLSX and replace only the example values. Keep the header names, External IDs, date format and selection values controlled.
5. Upload the file, inspect every automatic field mapping, and manually correct any field with a warning or no match.
6. Select **Test**. Do not select Import until the test reports no errors and the expected row count is correct.
7. After importing, search by External ID, open a sample record and verify relational links before loading the next dependent file.

Production safety

Use a staging database for the first rehearsal. The production screen contains real customer and employee information; never use a real customer export as a training file.

Required import order

1. Customer companies.
2. Individual contacts linked through `Related Company/External ID`.
3. CRM opportunities linked through `Customer/External ID`.
4. Staffing requirements linked through CRM Opportunity and Customer External IDs.

Import steps

1 Prepare and validate the file

Use one header row, ISO dates `YYYY-MM-DD`, numeric amounts without currency symbols and approved selection labels.

2 Open the target list and select Import records

Upload the file and inspect the preview. If the UI language differs from English, manually map each field.

3 Map relational fields by External ID

Do not match customers by approximate names when a stable External ID is available.

4 Select Test

Resolve every error before Import. Never ignore a row-count mismatch.

5 Import and reconcile

Record the file name, operator, import date and expected row count. Search/export the imported batch and compare totals.

Template	Purpose	Important dependencies
<code>crm_companies_import.csv</code>	Customer company master data.	Seed companies before related contacts/opportunities.
<code>crm_contacts_import.csv</code>	People related to customer companies.	Company External IDs must already exist.
<code>crm_candidates_import.csv</code>	Candidate Contact master data.	Use the Candidate tag; attach resumes after import.
<code>crm_recruiter_vendors_import.csv</code>	Recruiter/vendor companies.	Use Vendor and Recruiter Partner tags.
<code>employees_import.csv</code>	Employee master data and operational role.	HR must create internal users and sync access afterward.

Template	Purpose	Important dependencies
crm_opportunities_import.csv	Commercial opportunities with routing fields and contract dates.	Customer External ID must already exist.
staffing_requirements_import.csv	Role-level staffing requirements.	Opportunity must exist and be classified Staffing.
staffing_candidate_submissions_import.csv	Candidates proposed against requirements.	Requirement, candidate and recruiter login must exist.
staffing_interviews_import.csv	Interview schedule and client/internal interviewers.	Submission must exist; complete outcome manually.
staffing_placements_import.csv	Draft placements and commercial rates.	Use workflow buttons for approval, confirmation and activation.

Where to find Import

1. Open the target application and switch to **List view**. Import is normally not shown in Kanban or Form view.
2. Open the small **gear / Action** menu beside the list title. Depending on the Odoo theme, it may appear under **Favorites**.
3. Select **Import records**, upload CSV/XLSX, map fields, select **Test**, then select **Import**.

Template-to-screen map

Screen	Template button	When to use
Contacts	Customer Companies / Company Contacts / Candidates / Recruiter Vendors	Master customer, stakeholder, candidate and vendor data.
CRM Opportunities	CRM Opportunities	Load commercial opportunities with IntraStack routing and contract fields.
Employees	Employees and Roles	Load employee master data. HR still creates internal users and synchronizes access.
Staffing Requirements	Staffing Requirements	Load role-level requirements after the opportunity and customer exist.
Candidate Submissions	Candidate Submissions	Load one candidate against one requirement.
Interview Schedule	Interview Schedule	Load planned interviews after submission and interviewers exist.
Placements	Staffing Placements	Load draft placements only; use workflow buttons for approval and activation.
Banks / Bank Accounts	Banks / Contact Bank Accounts	Optional accounting master data. Import banks first, then accounts.

Export records

1 Open List view

Apply filters first so the list contains only the intended customers, opportunities or staffing records.

2 Select records

Select individual checkboxes or the header checkbox. If Odoo offers "Select all records", use it only after confirming the filter and total count.

3 Choose Action → Export

The Action menu appears after at least one record is selected. If Export is absent, ask an administrator to verify the user's Export permission.

4 Choose fields

Select only necessary fields. For a file intended for later re-import, include **External ID** and select the import-compatible export option.

5 Choose format and export

Use XLSX for business review and CSV for controlled system exchange. Store exported customer/candidate data only in approved locations.

Recommended export field sets

Record type	Recommended fields
Contacts	External ID, Name, Is a Company, Related Company, Email, Phone, Mobile, Website, Country, Job Position, Tags.
Opportunities	External ID, Opportunity, Customer, Salesperson, Team, Stage, Classification, Service Category, Urgency, Source, Expected Value, Contract dates, Next Activity.
Staffing Requirements	External ID, Requirement, CRM Opportunity, Customer, Role, Status, Positions, Recruiter, target dates, bill/cost rates and margin.
Placements	Requirement, Candidate, Customer, Status, Contract/SOW, Order, Project, dates, rates, weekly revenue and margin.

External ID discipline

Keep an External ID unchanged when updating a record. Assigning a new ID to an existing customer creates a duplicate; reusing one ID for a different entity can overwrite the wrong record.

06 | CRM Opportunity Data Model

An opportunity combines Odoo's standard CRM information with IntraStack fields that drive pipeline routing, quotation templates, commercial validation and delivery creation.

Field	Allowed values / meaning	Operating guidance
Opportunity	Short commercial description.	Include customer and service/requirement.
Customer	Company or commercial contact.	Required before quotation and Won.
Salesperson	Commercial owner.	Automation activities are assigned to this user.
Deal Classification	Staffing, Consulting, Subcontracting, Managed Services.	Controls team, first stage, quotation and project template.
Service Category	Cloud, AI/ML, Cybersecurity, DevOps, Data Engineering, App Modernization.	Select the dominant technology domain.
Urgency Flag	Immediate 0–30 days, Short-term 30–90 days, Long-term 90+ days.	Use the customer's decision/need timeline.
Source Tracking	LinkedIn, MSP Outreach, Prime Contractor, Referral, Vendor Portal, Website, Email, Other.	Use the original acquisition channel.
Expected Value	Estimated deal revenue.	Stored in Odoo's native expected revenue for forecasting.
Decision Maker?	Boolean.	Indicates whether the primary contact has decision authority.
Contract Start/End	Service delivery dates.	End cannot precede Start.
Renewal Review Date	Date to begin renewal planning.	Cannot be after Contract End.

Planned Activities

25 days overdue: "Qualify Lead within 24 hours" for Administrator

R1 — Lead Qualification Required

A new lead/opportunity has been created. Please:

- Review lead source and contact information
- Set Deal Classification and Service Category
- Determine Urgency Flag
- Schedule discovery call if qualified

Mark Done
Edit
Cancel

20 days overdue: "Re-engage prospect — No activity for 5+ days" for Administrator

R4 — Deal Stall Alert

This opportunity has had no stage update for 5+ days. Per IntraStack operating rules:

- Review the deal status and last activity
- Reach out to the prospect via email or call
- Update the opportunity with next steps
- If deal is dead, move to Lost with reason

July 15, 2026

Administrator - 26 days ago

Lead/Opportunity created

Current opportunity form: routing fields, commercial controls, contract dates, smart buttons and Chatter activities.

Automatic routing

When Deal Classification is set or changed, the server routes the opportunity to the matching Sales Team and its first stage. This also applies to API and import-created opportunities.

07 | The Four CRM Pipelines

P1 — Staffing

New Requirement Sourcing Submitted Interviews Offer Closed Won Active Billing Renewal

Stage	Exit criteria
New Requirement	Customer, role, skills, volume, dates, rate target and contact understood.
Sourcing	Recruiter assigned and candidates actively identified/screened.
Submitted	Qualified profiles and commercial rates sent to customer.
Interviews	At least one customer interview scheduled or completed with feedback.
Offer	Preferred candidate selected and terms under agreement.
Closed Won	Commercial readiness complete and Sales Order confirmed.
Active Billing	Placement active; time/billing process operating.
Renewal	Extension/renewal decision actively managed.

P2 — Consulting

Discovery Qualification Solution Design Proposal Negotiation Closed Won Delivery

P3 — Subcontracting

Outreach Vendor Qualification Capability Review Approved Vendor Active Engagement

P4 — Managed Services

Qualified Lead Assessment Proposal Contract Active Service Renewal

Current production CRM pipeline Kanban. Dragging a card changes stage, but users remain responsible for meeting exit criteria.

Current production pipeline screens

P1 — Staffing

P2 — Consulting

P3 — Subcontracting

P4 — Managed Services

How to use the Kanban screen

1. Use the search bar to filter My Pipeline, owner, customer, tag or stage.
2. Use the view switchers at the top-right to change between Kanban, List, Calendar, Pivot, Graph and Activities where available.
3. Use the plus icon on a stage only for a quick opportunity capture; open the full form immediately afterward.
4. Click a card to open the opportunity and use smart buttons rather than creating disconnected quotations, requirements or projects.
5. Drag a card only when the stage exit criteria are satisfied. Server-side routing still protects team/stage consistency.

Current CRM Import screen with the IntraStack Opportunities template available under Need Help?.

Do not manually mix pipelines

Each stage belongs to one team. The server checks classification/team/stage consistency so a Staffing deal cannot remain in a Consulting stage.

08 | Opportunity Operating Procedure

Create and qualify

1 Search Contacts first

Create or update the customer and primary contact before creating the deal.

2 Create the opportunity

Use the appropriate pipeline menu or the general Pipeline. Enter customer, salesperson and opportunity name.

3 Classify the deal

Complete classification, service category, urgency, source, expected value and decision maker status. The team/stage will route automatically.

4 Record the next action

Schedule an activity with an owner and deadline. Add discovery notes and files in the Chatter.

5 Progress using evidence

Move stages only when the required customer action, deliverable or approval exists.

Quick create versus full form

Current quick-create card. Use it only for initial capture, then select Edit/open the opportunity to complete all IntraStack fields.

1. Select **New** in Kanban to open the quick-create card.
2. Enter Organization/Contact, Opportunity, Email, Phone and initial Expected Revenue.
3. Select **Edit** when the record requires classification, service, urgency, source, decision-maker, contract or delivery fields.
4. After saving, verify the opportunity moved to the team and first stage matching Deal Classification.

Opportunity header and smart buttons

Control	Purpose
New Quotation / Quotations	Create or review linked quotations and Sales Orders.
Won / Lost	Close the commercial outcome. Won is validated against mandatory commercial data.
Staffing	Open Staffing Requirements related to a Staffing opportunity.
Delivery Project	Open the project generated from a confirmed order. It appears only when a project exists.
Activities	Schedule the next call, email, meeting or to-do with a deadline.
Send message / Log note	Communicate with followers or record internal-only operational context.

Commercial readiness before confirmation

The Sales Order cannot be confirmed until all of the following are complete:

- ☐ Customer.
- ☐ Deal Classification.

- ☐ Service Category.
- ☐ Urgency Flag.
- ☐ Source Tracking.
- ☐ Expected Value greater than zero.
- ☐ Contract Start and Contract End.
- ☐ At least one service product order line.
- ☐ Quotation customer matches the opportunity customer.

Moving an opportunity directly to a Won stage also invokes readiness validation. This prevents incomplete contracts from entering delivery.

Lost opportunities

When a deal is no longer viable, mark it Lost and choose a meaningful reason. Add a concise internal note describing the decision, competitor or timing issue. Do not leave dead opportunities indefinitely in an active stage.

09 | Activities and Automation

Activities make ownership and deadlines visible. Automated activities supplement—not replace—the salesperson's own follow-up plan.

Rule	Trigger	System action	Expected user response
R1	New lead/opportunity created.	Qualify Lead within 24 hours.	Verify contact, source, classification, service, urgency and discovery action.
R2	Staffing opportunity enters New Requirement.	Submit 5 candidates within 48 hours.	Review requirement, source/screen and submit qualified profiles with rates.
R3	Consulting opportunity enters Discovery.	Prepare discovery checklist and schedule call.	Research customer, prepare questions, schedule stakeholders and document outcomes.
R4	Open deal has no stage update for 5+ days.	Re-engage prospect alert.	Contact customer, update next step, progress or close Lost.

Administrator - 26 days ago

Lead/Opportunity created

Current opportunity activities and Chatter provide the audit trail for ownership, deadlines and follow-up.

Activity hygiene

- Complete an activity only after performing the action.
- Schedule the next activity before leaving an active opportunity.
- Use a meeting activity for scheduled discovery/interview events and record the outcome.
- Do not assign activities to inactive users or generic administrator accounts.

10 | Quotation, Contract and Sales Order

Automatic quotation template mapping

Classification	Commercial template	Typical content
Staffing	Staffing Rate Card	Engineer, Senior Engineer and Tech Lead hourly service lines.
Consulting	Consulting SOW	Discovery/Assessment, implementation engineering and project management.
Subcontracting	Staffing Rate Card	Rate-based service structure until a dedicated subcontractor SOW is approved.
Managed Services	Managed Services Contract	Onboarding, monthly managed service and additional hours.

Create and confirm a quotation

1 Complete opportunity data

Confirm customer, classification, service, urgency, source, value and contract dates.

2 Select Create Ready Quotation / New Quotation

The system selects the commercial template and links the quotation to the opportunity.

3 Review scope and price

Adjust quantities, descriptions and prices according to the approved proposal. Never confirm placeholder pricing.

4 Send for customer acceptance

Use the approved email/quotation process and capture required commercial approval.

5 Confirm

Confirmation validates commercial readiness, marks the opportunity Won and creates or reuses exactly one delivery project.

Today

A Administrator - nowCreating a new record...

Current Sales quotation form. Contract dates remain synchronized with the originating opportunity.

Traceability is automatic

The opportunity, Sales Order and delivery project contain links back to one another. Use these smart buttons rather than creating disconnected projects manually.

11 | Delivery Projects and Timesheets

Confirming a qualifying Sales Order creates one delivery project. If Odoo's standard service-product project already exists, the integration reuses it instead of creating a duplicate.

Project templates

Service line	Template	Operating intent
Staffing	Staffing Delivery	Onboarding, assignment readiness, ongoing coordination and closeout.
Consulting	Consulting Delivery	Discovery, design, implementation, acceptance and handover tasks.
Managed Services	Managed Service Engagement	Onboarding, service transition, SLA operation and review tasks.
Subcontracting	Standard project	Project created without a dedicated BRD template; PM defines tasks for the engagement.

Current project template task board. Owners, deadlines and stages should show the true delivery state.

Project Manager procedure

1. Open the project from the CRM opportunity or confirmed Sales Order.
2. Verify customer, opportunity and order links.
3. Review template tasks, remove only tasks that are truly out of scope and add project-specific deliverables.
4. Assign every active task to an accountable user with a deadline.
5. Record risks, decisions and acceptance evidence in task/project Chatter.
6. Review timesheets, overdue tasks and milestones at least weekly.

Timesheet procedure

- Record time against the correct project and task, preferably daily.
- Use a clear description of the work performed, not a generic label such as "work".
- Do not record time before the authorized contract/project start.
- Project Managers approve or correct time before billing/reporting cutoffs.

Current Projects screen. Open the linked delivery project to manage tasks and record timesheets.

12 | Staffing Workflow Overview

The CRM Staffing pipeline reports the commercial status. Staffing Operations holds the operational detail for roles, candidates, interviews and placements.

Staffing Operations menus

- **Requirements:** roles or slots requested by customers.
- **Candidate Submissions:** candidates sourced for each requirement.
- **Interview Schedule:** recruiter, technical, client, managerial and final interviews.
- **Placements:** approved candidate engagements with rate, contract and project links.

Responsibility split

Role	Accountability
Sales Executive/Manager	Customer relationship, commercial opportunity, expected value, rate agreement and contract.
Recruiter	Requirement detail, sourcing, screening, candidate submission and interview coordination.
Sales/Operations approver	Placement commercial approval, contract reference and margin.
Project Manager	Onboarding, delivery coordination, time approval and customer execution.

Current Staffing Operations navigation

Current Requirements screen. The Staffing Operations menu also opens Candidate Submissions, Interview Schedule and Placements.

13 | Staffing Requirements

Requirement states

Draft Open Sourcing Interview Offer Filled On Hold Cancelled

Create a requirement

1. Open a Staffing-classified opportunity and use the Staffing smart button, or open CRM → Staffing Operations → Requirements.
2. Select the CRM Opportunity. The customer and contract dates may default from the opportunity.
3. Enter Requirement name, Role / Job Title, required skills, positions and recruiter.
4. Enter location, work arrangement (On-site/Hybrid/Remote) and engagement type (Contract/Contract to Hire/Permanent).
5. Enter expected start/end and target fill date.
6. Enter target bill rate, target cost rate and rate unit. Review calculated Target Margin and Target Margin %.
7. Add acceptance criteria and job description; attach supporting requirement documents where appropriate.
8. Select Open, then Start Sourcing when recruitment begins.

Role Specification Candidate Submissions Placements Internal Notes

Required technologies, certifications and clearance...

Describe the role, responsibilities and acceptance criteria...

Current Requirement form with status buttons, smart buttons, customer linkage, role and commercial target sections.

Requirement field instructions

Field/group	Operator instruction
CRM Opportunity	Select the Staffing opportunity that originated this role. The server rejects non-Staffing opportunities.
Customer / Contact	Select the customer company and operational stakeholder. The contact must belong to that customer.
Recruiter / Positions	Assign an active internal recruiter and enter the actual number of openings.
Role & Engagement	Complete job title, skills, work arrangement, engagement type, location and dates.
Commercial Targets	Enter bill and cost rates, select the rate unit and review calculated margin before sourcing.
Status controls	Use the workflow buttons; do not edit status through imports merely to skip approvals.

Requirement controls

- Positions must be greater than zero.
- Target cost must not exceed target bill rate.
- Expected End and target dates must be logically consistent with Expected Start.
- The linked opportunity must be an opportunity classified as Staffing.
- Filled/open positions are computed from active confirmed placements.

Requirement versus opportunity

Create multiple requirements under one customer opportunity when the customer requests different roles, locations or rate structures. Do not overload one requirement with unrelated jobs.

14 | Candidate Submissions

Submission states

Sourcing Screening Submitted Interview Offer Accepted Rejected Withdrawn

Create and progress a submission

1. Create or locate the candidate as an individual Contact. Search by email before creating a new candidate.
2. From the Requirement, add a Candidate Submission.
3. Select source: Internal Talent Pool, Referral, Recruiter/Vendor, LinkedIn, Job Board or Other.
4. If sourced through a vendor, select the Recruiter Vendor.
5. Upload Resume/CV and enter availability, screening summary and internal notes.
6. Enter proposed bill and cost rates. Verify positive margin.
7. Select Start Screening and document screening results.
8. Select Submit when the profile has been sent to the customer; the submitted date is recorded.
9. Move to Interview or Offer based on customer progression. Use Reject/Withdraw with a clear note when appropriate.

Submission quality standard

- ☐ Candidate identity and contact details are verified.
- ☐ Current resume is attached.
- ☐ Availability and location/work arrangement fit the requirement.
- ☐ Screening summary addresses mandatory skills.
- ☐ Bill/cost rates are commercially viable.
- ☐ Duplicate active submission for the same candidate/requirement is avoided.

Screening notes, skills validation and availability...

Current Candidate Submission form with source, recruiter/vendor, resume, screening, proposed rates, margin and workflow controls.

15 | Interviews and Feedback

Interview records create an auditable schedule and outcome history linked to the requirement and candidate submission.

Field	Values / use
Interview Round	Recruiter Screening, Technical, Client, Managerial or Final.
Mode	Video Call, Phone or On-site.
Internal Interviewers	Responsible IntraStack users.
Client Interviewer	Customer contact linked to the requirement customer.
Start / Duration	Scheduled datetime and duration; End is calculated.
Outcome	Pending, Strong Yes, Yes, No or Strong No.
Feedback	Evidence-based assessment and next recommendation.

Interview procedure

1. Create the interview from the candidate submission.
2. Set round, mode, date/time, interviewers, location or meeting link.
3. Confirm details with candidate and customer outside the system using the approved channel.
4. After the interview, select an outcome and enter feedback.
5. Select Complete. The system will not allow completion while the outcome remains Pending.
6. Use No Show, Cancel or Reschedule when required so pipeline statistics remain accurate.

Current Interview Schedule calendar for upcoming recruiter, technical, client, managerial and final interviews.

The screenshot shows a web application interface for a 'Candidate - Recruiter Screening - Unscheduled' form. The top navigation bar is the same as the previous screenshot. The main header displays 'New Interview Schedule' and 'Candidate - Recruiter Screening - Unscheduled'. Below the header, there are buttons for 'Complete Interview', 'No Show', and 'Cancel'. The form is divided into several sections: 'INTERVIEW', 'SCHEDULE', 'PARTICIPANTS', and 'OUTCOME'. The 'INTERVIEW' section includes fields for 'Requirement', 'Candidate Submission', 'Candidate', 'Customer', 'Interview Round' (set to 'Recruiter Screening'), and 'Mode' (set to 'Video Call'). The 'SCHEDULE' section includes fields for 'Start', 'Duration (hours)' (set to '1.00'), 'End', and 'Meeting Link'. The 'PARTICIPANTS' section includes fields for 'Internal Interviewers' and 'Client Interviewer'. The 'OUTCOME' section includes fields for 'Outcome' (set to 'Pending') and 'Interview Feedback' (set to 'Record structured feedback and next steps...'). There is also a section for 'Internal notes...'. The form is clean and modern, with a purple header and a white background.

Current Interview form with round, mode, schedule, participants, feedback and outcome controls.

Feedback standard

Record job-relevant, objective observations. Do not enter discriminatory, speculative or unnecessary sensitive personal comments.

16 | Placements and Margin Control

Placement states

Draft Pending Approval Confirmed Active Completed Cancelled

Create a placement

1. Use an accepted/offered Candidate Submission from the correct Requirement.
2. Enter Placement Start/End, bill rate, cost rate, rate unit and hours per week.
3. Link the confirmed Sales Order or enter a signed Contract/SOW reference.
4. Verify the customer on the order/project matches the requirement customer.
5. Review Gross Margin, Gross Margin %, Weekly Revenue and Weekly Margin.
6. Select Submit for Approval, then Confirm after commercial approval.
7. Select Activate only on or after the contract start date.
8. Select Complete at the end of service; the system records an end date if one is missing.

Placement validation rules

- Bill and cost rates cannot be negative.
- Bill rate must exceed or equal cost rate.
- A confirmed Sales Order is required when an order is linked.
- A contract/SOW reference or Sales Order is required before confirmation.
- Candidate submission and placement must belong to the same requirement.
- Placement cannot become Active before Placement Start.
- Customer must match across requirement, quotation and project.

The screenshot shows a 'Staffing Placement' form in a CRM system. The top navigation bar includes CRM, Sales, P1 — Staffing, P2 — Consulting, P3 — Subcontracting, P4 — Managed Services, Reporting, Staffing Operations, and Configuration. The form is currently in the 'Draft' stage, with other stages being Pending Approval, Confirmed, Active, and Completed. The form is divided into several sections:

- PLACEMENT**: Includes fields for Requirement (a dropdown menu), Candidate Submission, Candidate, Customer, and CRM Opportunity ?.
- CONTRACT**: Includes fields for Contract / SOW Reference, Customer PO, Placement Manager (with a sub-field for Administrator), Placement Start, and Placement End.
- COMMERCIAL TERMS**: Includes fields for Rate Unit (Hour), Bill Rate (0.00), Cost Rate (0.00), Hours / Week ? (40.00), Gross Margin (0.00), Gross Margin % (0.00), Weekly Revenue (0.00), and Weekly Margin (0.00).
- DELIVERY LINKS**: Includes fields for Quotation / Sales Order and Delivery Project, and a text area for Contract, onboarding and delivery notes...

Current Placement form. Use Draft → Submit for Approval → Confirm Placement → Start Placement.

Automatic operational synchronization

Confirming a placement marks the candidate submission Accepted and updates the requirement's filled/open position counts.

17 | Cloud Transformation Workflow

This is the primary Consulting end-to-end example requested for platform readiness.

Detailed operating steps

1. Create/update the customer and stakeholder contacts.
2. Create an opportunity with Deal Classification **Consulting** and Service Category **Cloud**.
3. During Discovery, document business objectives, current-state environment, stakeholders, constraints and target outcomes.
4. During Qualification, validate budget, authority, need, timeline, data/security constraints and procurement path.
5. During Solution Design, define assessment outputs, target architecture, migration waves, assumptions, dependencies and acceptance criteria.
6. Create the Consulting SOW quotation. Review Discovery/Assessment, Implementation and Project Management lines.
7. Enter contract dates and expected value; negotiate scope, price and terms.

8. Confirm the accepted Sales Order. The opportunity becomes Won and the Consulting delivery project is created.
9. The Project Manager assigns cloned template tasks, delivery owners and deadlines.
10. Consultants record time and evidence against the correct project tasks.
11. At completion, capture acceptance, handover and follow-up/renewal opportunities.

Assessment evidence

Store meeting notes, architecture documents and proposal artefacts in the appropriate opportunity/project Chatter. Avoid storing confidential credentials or secrets in Odoo attachments.

18 | Other Service Workflows

Subcontracting

1. Create a company Contact for the partner/vendor and apply approved vendor-related tags.
2. Create a Subcontracting opportunity and assign the relationship owner.
3. Progress Outreach → Vendor Qualification → Capability Review.
4. Document certifications, capability, commercial constraints, references and risk.
5. Move to Approved Vendor only after required business approval.
6. For a live engagement, create/confirm the commercial document and use the generated standard project for delivery coordination.

Managed Services

1. Qualify customer fit and perform the infrastructure/service assessment.
2. Define service scope, coverage hours, response targets, exclusions, onboarding and reporting cadence.
3. Create the Managed Services quotation containing onboarding, monthly service and additional-hours lines.
4. Enter contract and renewal review dates before confirmation.
5. Confirm the Sales Order and execute onboarding through the generated Managed Service project.
6. Move to Active Service only when service transition is complete.
7. Use Renewal before expiry to review scope, satisfaction, usage and pricing.

Community edition billing boundary

The platform stores contract dates, monthly service lines and delivery projects, but unattended recurring subscription invoicing is not provided by standard Odoo 17 Community. Follow the approved manual invoice calendar or deploy an approved OCA subscription module.

19 | Employee Activation Administration

This section is intended for HR Managers and System Administrators.

Create and invite an internal user

1. Create/open the Employee record.
2. Enter a unique Work Email.
3. Select the IntraStack Role.
4. Select **Create Internal User**. Confirm login and create the user.
5. Select **Sync IntraStack Access** to apply the complete managed role bundle.
6. If necessary, select **Resend Invitation**.
7. Ask the employee to set a password and verify required applications.

Today

A Administrator - now Creating a new record...

Current Employee form. Enter the employee identity and work email, then select the operational role before user activation.

Operational role bundles

Role	Use this role when	Core managed access
Sales Manager	The employee owns team pipeline, forecasting and commercial governance.	CRM/Sales management, Projects and timesheet approval.
Sales Executive	The employee owns assigned customers, deals, activities and quotations.	CRM/Sales user, Projects and personal timesheets.
Recruiter	The employee runs requirements, candidates and interviews.	CRM access needed for staffing, Staffing Operations and Project user.
Project Manager	The employee plans delivery and approves execution/time.	CRM visibility, Project management and timesheet approval.
Consultant	The employee performs assigned delivery tasks.	Project user and personal timesheets.

Change a role

1. Change IntraStack Role on the Employee.
2. Select Sync IntraStack Access.
3. The system removes the old managed bundle, applies the new one and preserves unrelated approved groups.
4. Test access using the employee account or a controlled UAT user.

Portal users are not valid employees for this workflow

If an employee is linked to a portal/share user, convert or recreate the account as an internal user before syncing access.

Email dependency

Invitation and password-reset delivery require a working outgoing SMTP server. If the Invitation Pending indicator remains active, verify mail configuration and resend.

20 | Reporting and CEO Controls

Odoo's CRM reporting views combine the native forecast fields with IntraStack classifications, teams and activities.

Management review areas

- Pipeline value and expected revenue by classification/team.
- Opportunity count and value by stage.
- Overdue and upcoming activities by owner.
- Stalled opportunities and deals without a next action.
- Won/lost conversion and loss reasons.
- Staffing requirement fill progress and active placements.
- Gross margin at requirement/submission/placement level.
- Projects, overdue tasks and timesheet utilization.

Saved CEO filters

The module installs seven saved filters for recurring executive review. Managers can combine these filters with Group By for salesperson, stage, customer, classification or service category.

Current CRM reporting supports graph, pivot and list analysis using the same opportunity records.

Weekly pipeline review questions

- Does every active deal have a real next action and owner?
- Are stage, expected value, probability and close timing evidence-based?
- Which deals have been stationary for more than five days?
- Which Staffing requirements are at risk against target fill date?
- Which placements or services approach renewal?
- Are confirmed commercial records linked to exactly one delivery project?

21 | Daily Playbooks by Role

Sales Executive — daily

- Review My Activities and overdue items.
- Update customer/contact details from new interactions.
- Progress opportunities using evidence and schedule the next action.
- Review quotations awaiting response.
- Close dead deals Lost with a reason.

Sales Manager — daily/weekly

- Review team pipeline, stalled deals and forecast quality.
- Validate commercial readiness before major confirmations.
- Review rate/margin exceptions and upcoming renewals.
- Coach owners on incomplete records and overdue actions.

Recruiter — daily

- Review open requirements and target fill dates.
- Progress sourcing/screening and update candidate records.
- Schedule interviews and chase outstanding feedback.
- Maintain submission rates, availability and resume currency.

Project Manager — daily/weekly

- Review project tasks, blockers and deadlines.
- Confirm owners and customer acceptance criteria.
- Review submitted timesheets and delivery risks.
- Keep opportunity/order/project traceability intact.

Consultant — daily

- Review assigned tasks and priorities.
- Update task progress and blockers.
- Record accurate time with meaningful descriptions.
- Upload deliverables to the approved project/task location.

22 | Data Governance and Security

Minimum governance rules

- Search before creating customers, contacts, candidates, opportunities and requirements.
- Use approved tags, selections and naming standards.
- Do not delete records that are referenced by quotations, projects, staffing records or timesheets.
- Use Archive for obsolete master data and Lost/Cancelled for terminated workflows.
- Do not export customer/candidate data without a legitimate business purpose.
- Keep passwords, API keys, infrastructure secrets and private credentials outside Odoo records and attachments.
- Do not grant access manually when the Employee role workflow can be used.

Chatter guidance

Use Chatter for	Do not use Chatter for
Customer decisions, meeting outcomes, approved assumptions, delivery evidence, internal handoff notes.	Passwords, secrets, unverified allegations, excessive personal data or off-topic conversation.

Audit readiness

A complete business record should show who created/changed it, the customer context, current owner, next action, stage history, commercial document, contract dates and downstream delivery record.

23 | Troubleshooting and FAQ

Problem	Likely cause	Resolution
Opportunity moves to another team/stage after saving.	Classification routing corrected an inconsistent manual selection.	Confirm the Deal Classification. Use stages belonging to that pipeline.
Cannot mark Won.	Commercial readiness fields are missing.	Complete customer, classification, service, urgency, source, positive value and contract information.
Cannot confirm quotation.	Missing readiness fields, no service line or customer mismatch.	Read the validation message and correct the opportunity/order rather than bypassing it.
Wrong quotation template.	Deal Classification is incorrect or was changed after quotation creation.	Correct classification and recreate/review the quotation before confirmation.
Duplicate delivery project.	A project was created manually outside the integrated flow.	Use the project linked from CRM/Sales Order; ask an administrator to reconcile duplicates.
Cannot create Staffing Requirement.	Opportunity is not classified Staffing or required fields are missing.	Correct the CRM opportunity and enter customer, role, positions and recruiter.
Cannot complete interview.	Outcome is still Pending.	Select an outcome and enter feedback.
Cannot confirm placement.	No contract/order, unconfirmed quotation, invalid rates or mismatched customer.	Correct the commercial link and margin data.

Problem	Likely cause	Resolution
Cannot activate placement.	Placement is not Confirmed or start date is in the future.	Confirm approval and wait until the authorized start date.
Employee cannot see CRM/Sales/Project.	Role not synced, user is portal, or invitation incomplete.	HR Manager verifies Work Email/Internal User, selects role and Sync IntraStack Access.
Invitation email not received.	SMTP, spam filtering or invalid work email.	Verify email, mail server/logs and use Resend Invitation.
Import creates duplicates.	External IDs changed or customer names used as unstable keys.	Restore correct External IDs, deduplicate under administrator control and rerun Test.

Do not self-fix production data with SQL

End users must report errors with the record URL, steps, exact message and timestamp. Database changes are restricted to authorized administrators with backup and change control.

24 | Complete Worked Example and Training Simulation

This chapter is the recommended classroom “golden path”. All names, addresses and commercial values below are fictional. Use a training/staging database or records clearly prefixed **TRAINING**; do not create these examples in production without authorization.

Scenario and actors

Item	Training value
Customer	TRAINING — Atlas Manufacturing
Customer contact	Emily Carter, Head of Technology, emily.carter@example.test
Sales owner	Training Sales Manager
Recruiter	Training Recruiter
Project Manager	Training Project Manager
Consulting deal	TRAINING — Atlas Cloud Transformation 2026
Staffing deal	TRAINING — Atlas Senior Cloud Architect Staffing
Candidate	TRAINING — Maria Santos

Part 1 — Create the customer database

1 Create the customer company

Open Contacts → New → Company. Enter **TRAINING — Atlas Manufacturing**, a fictional address, country, website and telephone. Add the Staffing Buyer tag if the scenario includes staffing.

2 Add the decision maker

Inside the company, add Emily Carter as an individual contact. Enter job position Head of Technology, fictional email/mobile and link her to Atlas Manufacturing.

3 Validate search

Return to Contacts, search Atlas and Emily, and confirm company/person are connected rather than duplicated.

Expected result: one company, one related stakeholder, searchable contact information and correct relationship tags.

Part 2 — Run a Cloud Transformation deal from discovery to delivery

2.1 Create and classify the opportunity

Field	Training value
Opportunity	TRAINING — Atlas Cloud Transformation 2026
Customer	TRAINING — Atlas Manufacturing
Deal Classification	Consulting
Service Category	Cloud
Urgency Flag	Short-term (30–90 days)
Source Tracking	Referral
Expected Value	75,000
Decision Maker?	Enabled
Contract Start / End	2026-09-01 / 2026-12-31
Renewal Review Date	2026-11-01

1. Open CRM → P2 — Consulting and select New.
2. Use quick create for the name/customer, then select Edit to complete all fields above.
3. Save and confirm Sales Team is P2 — Consulting and the first stage is Discovery.
4. Open Activities. Review the automatic Qualify Lead and discovery-preparation activities.
5. Log a note: current environment, stakeholders, objective, known constraints and agreed next meeting.

Expected result: correctly routed Consulting opportunity with an accountable salesperson, a next activity and complete commercial metadata.

2.2 Progress discovery and qualification

1. In Discovery, record current-state systems, workloads, security constraints, business outcomes and stakeholders.
2. Complete the discovery activity only after the call is held; immediately schedule the next action.
3. Move to Qualification after confirming budget, authority, need, timeline and procurement path.
4. Move to Solution Design after technical owners and acceptance criteria are agreed.
5. Upload only approved non-secret architecture/proposal artefacts to Chatter.

2.3 Create the SOW quotation

1. Select **New Quotation** from the opportunity.
2. Verify the customer and opportunity linkage.
3. Verify the Consulting SOW template and review Discovery/Assessment, Implementation and Project Management service lines.
4. Adjust descriptions, quantities and prices to match the approved proposal. Ensure the order total and Expected Value are commercially consistent.
5. Move the CRM stage to Proposal, send the quotation through the approved channel and record customer feedback.
6. Move to Negotiation when scope/price/terms are under final review.

2.4 Confirm and verify integrated delivery

1. Before confirmation, recheck Customer, Classification, Service Category, Urgency, Source, positive Expected Value, contract dates and at least one service line.
2. Confirm the Sales Order only after customer acceptance.
3. Return to the opportunity and verify it is Won/Closed Won and shows one linked Delivery Project.
4. Open the project and verify the opportunity and Sales Order links.
5. Review the five Consulting template tasks; assign owners, deadlines and acceptance evidence.
6. As a Consultant, open the correct task and record a training timesheet with a meaningful description.

Expected result: one chain of traceability: Customer → Consulting Opportunity → SOW/Sales Order → one Delivery Project → tasks/timesheets.

Part 3 — Run the Staffing branch end to end

3.1 Create the Staffing opportunity and requirement

1. Create **TRAINING — Atlas Senior Cloud Architect Staffing** with Classification Staffing, Service Cloud, Expected Value 40,000 and suitable contract dates.
2. Verify automatic routing to P1 — Staffing / New Requirement.
3. Use the Staffing smart button or CRM → Staffing Operations → Requirements.
4. Create requirement **TRAINING — Atlas Senior Cloud Architect — HCMC**.
5. Select the Staffing opportunity, Atlas customer, Emily as contact and Training Recruiter.
6. Enter one position, Hybrid, Contract, expected start/end and target fill date.
7. Enter required skills: AWS, Terraform and Kubernetes.
8. Enter Target Bill Rate 65/hour and Target Cost Rate 45/hour; verify positive Target Margin.
9. Select Open, then Start Sourcing.

3.2 Create and submit a candidate

1. Create candidate contact **TRAINING — Maria Santos**, Individual, with the Candidate tag and fictional contact details.
2. From the requirement, create a Candidate Submission for Maria.
3. Select source LinkedIn, availability date, proposed bill 65 and cost 45.
4. Attach a non-sensitive training resume and record a screening summary covering the mandatory skills.
5. Select Start Screening. After the mock screening, select Submit to Client.
6. Verify Submitted On is populated and requirement/submission links are correct.

3.3 Schedule and complete the interview

1. Open Candidate Submission → Interviews and create a Client interview.
2. Select Video Call, date/time, duration, Training Project Manager as internal interviewer and Emily as client interviewer.
3. Enter a fictional meeting link. Review the event in Interview Schedule calendar.
4. After the simulation, select outcome Strong Yes and enter job-relevant feedback.
5. Select Complete Interview. Confirm the submission moves to Interview, then move it to Offer.

3.4 Create, approve and activate the placement

1. Create a Placement from the accepted/offered submission.
2. Enter a fictional SOW reference, start/end dates, 65 bill rate, 45 cost rate and 40 hours/week.
3. Link the confirmed Staffing Sales Order or Delivery Project when available.
4. Review Gross Margin, Margin %, Weekly Revenue and Weekly Margin.
5. Select Submit for Approval and then Confirm Placement after commercial review.
6. Attempt Start Placement before the start date during training and observe the validation; do not bypass it.
7. On/after start date, select Start Placement. Verify placement Active, submission Accepted and requirement Filled Positions/Open Positions updated.

Expected result: Staffing Opportunity → Requirement → Candidate Submission → Interview → confirmed Placement, with commercial and operational links intact.

Part 4 — Employee onboarding simulation

1. As HR Manager, create **TRAINING — Sales Executive** with a controlled training email.
2. Select IntraStack Role Sales Executive.
3. Select Create Internal User, then Sync IntraStack Access.
4. Resend Invitation only if required and SMTP is configured.
5. Log in as the training user and verify Contacts, CRM, Sales, Projects and Timesheets according to the assigned role.
6. Change the role only as a separate access-control exercise, synchronize again and verify old managed permissions are removed.

Trainer evidence and sign-off

Trainer sign-off checklist

- ☐ Participant can find a customer and review contact information.
- ☐ Participant can create/classify an opportunity and explain automatic routing.
- ☐ Participant understands Won/confirmation readiness.
- ☐ Participant can explain CRM → quotation → project traceability.
- ☐ Recruitment users can complete Requirement → Submission → Interview → Placement.
- ☐ Delivery users can update tasks and timesheets.
- ☐ Managers can use activities, saved filters and reports.
- ☐ The complete fictional record chain can be followed through smart buttons without disconnected duplicates.

Appendix A | Quick Reference and Glossary

Quick process references

Objective	Recommended path
Find customer details	Contacts → search company/person → open record.
Create a deal	CRM → appropriate P1/P2/P3/P4 pipeline → New.
Import opportunities	CRM list → Import records → Test → Import.
Create a quotation	Opportunity → Create Ready Quotation/New Quotation.
Open delivery	Opportunity or Sales Order → Delivery Project smart button.
Create staffing requirement	Staffing opportunity → Staffing smart button, or CRM → Staffing Operations → Requirements.
Review interviews	CRM → Staffing Operations → Interview Schedule.
Review placements	CRM → Staffing Operations → Placements.
Activate employee access	Employees → Employee → role → Create Internal User → Sync IntraStack Access.

Glossary

Term	Definition
CRM Opportunity	A potential commercial engagement tracked through a service-specific pipeline.
External ID	A stable import/integration key used to create or update the same record safely.
SOW	Statement of Work defining scope, deliverables, assumptions, price and acceptance.
Requirement	A specific customer staffing need, role or position set.
Submission	One candidate proposed against one staffing requirement.
Placement	The approved commercial engagement of a selected candidate.
Bill Rate	Amount charged to the customer per rate unit.
Cost Rate	Direct consultant/vendor cost per rate unit.
Gross Margin	Bill Rate minus Cost Rate; percentage is margin divided by bill rate.
Delivery Project	Project record generated from a confirmed commercial engagement.
Activity	A scheduled action with an owner and deadline attached to a business record.
Chatter	Odoo's record-level communication, attachment and change-history area.

Support request information

When requesting support, provide: user name, date/time and timezone, record URL, exact error text, steps immediately before the error, expected result and a screenshot that does not expose passwords or secrets.
